CORE PRODUCT >>

>> Energy saving module

- Non-power driven (IN signal working both as power supply and control signal), very convenient
- Extremely surprising power saving performance (50%-90% down), cooling down coil and elongate life
- DIN connector style makes valve more compact
- Adjustable up to 2000HZ high frequency
- Response speed of ESH2DC-A75 pressure increasing module increases 40%
- Better opening reliability of power saving DC valve

Energy Saving Module

80~90% power saving; Strongly reducing down coil temperature; Increase opening liability of DC solenoid valve; Working at no power

Solenoid valve use energy saving module (Fixed parameters)

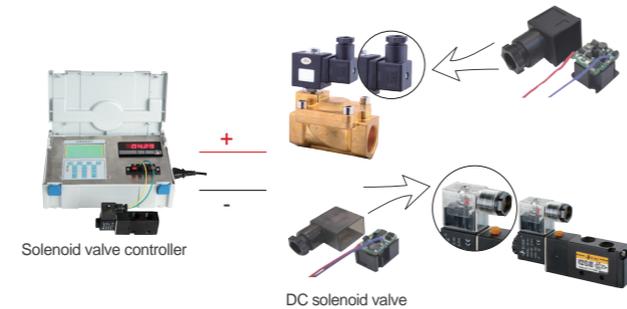

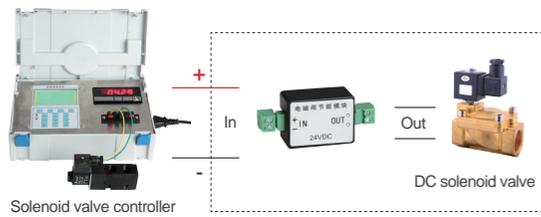

Specifications

Model	ESH2DC-B75 ESH2DC-C75 ESH2DC-D75
Passages	1
Inlet signal (IN)	20~25VDC
Outlet signal (OUT)	DC driven, max power 48W

How to use

ESH2DC-B75: Direct connect solenoid valve control signal to marks " IN " of the power saving module, and connect the marks " OUT " to solenoid valve. In other words, the power saving follows IN and OUT way in Series Connection way.

ESH2DC-C75/D75: Designed according DIN43650B and DIN43650A standard, direct connect to valve DIN coil

Energy Saving Module

General Use Energy Saving Power (Parameters Adjustable)

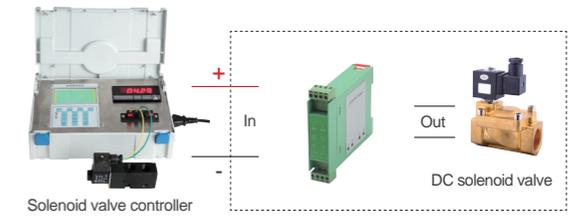

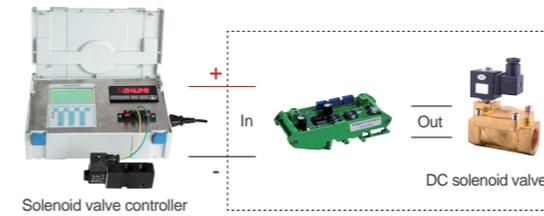

Specifications

Passages: 2 passages for ESH2DC-A75, 1 passage for ESH2DC-E75	
Inlet signal (IN)	20~25VDC
Time adjusting P1	1~26ms
Holding voltage adjusting P2	5~14VDC
Opening voltage adjusting P3	26~39VDC
Out signal (OUT)	DC driven, max 48W

How to use :

Direct connect solenoid valve control signal to marks " IN " of the power saving module, and connect the marks " OUT " to solenoid valve. In other words, the power saving follows IN and OUT way in Series Connection way.

Note:

'IN' signal is 24VDC, which requires the power can drive solenoid valve before connecting to the module;

The module parameters are already set in production, it ' s adjustable according to valve conditions for optimization;

P11、P12、P13 and P21、P22、P23 are adjustable parameters, professional engineers are recommended to make adjustment with special instrument. (for ESH2DC-A75 and ESH2DC-E75)

Hydraulic valve use power saving module

Personalized design for hydraulic valve, according to power, response, dimensions, working temperature, connector size. Supporting valve with voltage range 18-30V, power lower than 14W, max frequency 200HZ, power saving 50%, a specific valve needed for sampling.

- Compact integration modularity

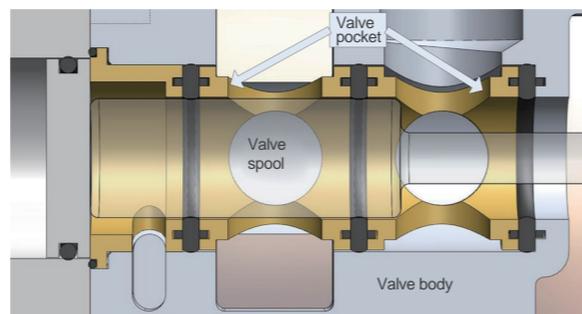

VI series valve island

The core unit of future control system—valve island. E.MC spent 5 years on developing VI series valve island, which are widely approved by global market with fast response, smart appearance, clear electric line design. 14mm compact valve body makes max 900L/min flow, 0.6 low power, directly controlled by computer, single control respond at 15 cycles/second, while double control respond at 20 cycles/second, multiple assembling style and interface available, available with 4, 6, 8 assembly, applied in many control situation especially complex line control system. Currently, VI series valve island has full size range for 5/2 way and 3/2 way, the 5/3 way will be finished soon. In the future we will continue developing more valve island for different industry application.

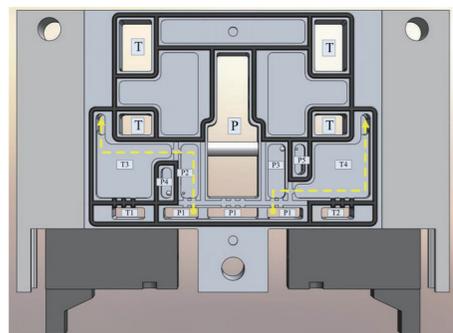

1. Valve body design

- Different combination of valve body, side plate, spool, and seals provides various modes, including 5/2, 3/2, and 5/3 way.
- Unified valve body design to make sure all air path going well without any blocking or leaking
- 1st class facilities, e.g. Horizontal machining center gives E.MC valve island a perfect realization

2. Spool and seal structure design

- Changed the structure of spring return of pneumatic components and realized air return of spool, increased valve liability and life cycle with special design
- Complete new interference structure, use valve pocket to fix and protect seals, simplify technics and elongate valve life cycles
- Seals are not mounted on spool, very convenient for mounting and maintenance by putting valve pocket and seals in our out directly.

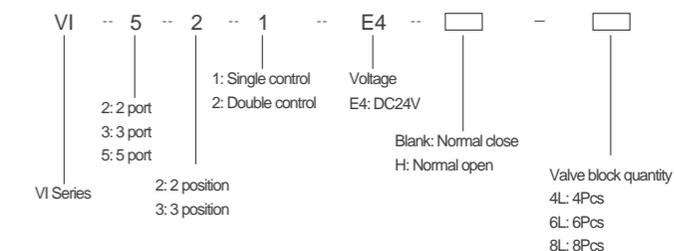

3. Fieldbus technology

Fieldbus module developing and extension, makes E.MC valve island widely applied in all kinds of automation manufacturing and digital control occasions.

VI Series Valve Island

Compact size; High flow rate; Multi function; Various control ways; Various mounting types

CORE PRODUCT >>

>> Air filter, regulator and lubricator

- Maximized flow with enlarged filtering area on filter element
- Diaphragm structure, with suitable spring force after trial and demonstration, to make sure best regulator pressure performance
- Special structure design of lubricator, oil adding at any time without stopping working
- Wide application with polycarbonate water and coil cup
- The updated E/EI series FRL, with E-MC engineers deep study, test and special body design, it supports more than 9 Bar in actual application while normal FRL oilers break for long time use, which proves top technology in FRL field and give a better air source solution for higher pressure demanded fields.
